

Department: CSE

Name of the event: GATE EXAM

Date: 20th January 2026

Report: The Department of Computer Science and Engineering conducted a GATE Test on 20th January 2026 for Third-year B.Tech students of Sections A, B, and C with the objective of strengthening their conceptual understanding and enhancing their preparedness for competitive examinations and placement interviews. The test was designed to familiarize students with the pattern, difficulty level, and time management strategies required for the Graduate Aptitude Test in Engineering (GATE). A total of students from Sections A, B, and C actively participated in the assessment, demonstrating keen interest and engagement. The outcome of conducting the GATE examination in engineering colleges is the enhancement of academic quality and student competency. It helps identify students with strong conceptual knowledge, analytical thinking, and problem-solving abilities. GATE motivates engineering students to strengthen their fundamentals and adopt a deeper, concept-oriented learning approach. Successful candidates gain opportunities for higher education in premier institutions such as IITs, NITs, and IISc, as well as recruitment in Public Sector Undertakings (PSUs). The examination also sets a national benchmark for academic standards, encourages research orientation, and improves the overall teaching-learning process within engineering colleges.
